Energofish is in Europe, watch out for the new products!

"There is an increasing demand for Energofish products in Romania, Hungary, Slovakia and also in Western Europe" said István Pál, general manager of Energofish Ltd, after he had received the fourth EFTTEX prize in 2017. Energofish won the soft/dough/natural hookbait category with its Luminophore Worm from its Jelly Baits range, the same range that produced the winner three years ago. And then it had cause for a double celebration when One Enzymax, a particle bait, won the Visitors' Choice category, arguably the most coveted award in 2017.

The whole story started 26 years ago thanks to József Markóczy, who was born in the Soviet Union and moved to Hungary in the 1970s. Back then, Energofish had no more than 4 employees, a 150 m2 building and a couple of products. Now, it has a team that counts more than 100 people, considerable production capacity, and all together more than 6000 m2 of real properties for wholesaling. We can safely say that Energofish Ltd has become the leading wholesaler in Hungary and Romania.

Energofish Ltd has always placed great emphasis on involving experts in its activities. The Benzar hookbaits and groundbaits stand out from the company's own brands. These products were awarded in the EFTTEX exhibition. No wonder they are enjoying enormous popularity among anglers and traders. The Czech and Slovakian markets, which the company approached a few years ago, are also promising. Moreover, there is an increasing demand for its own products in Germany and France. The international website of the company, which offers nearly the whole inventory of its products within the EU, is aimed at addressing these demands.

In the future Energofish is planning to spread in the EU and improve its own products. The company guarantees that foreign partners receive the latest products and baits first-hand.

CONTENT

FISHING RODS

Poles / Bolognese rods / Match rods
Feeder and picker rods / Carp rods / Two section rods
Telescopic rods / Spinning rods / Big fish rods

REELS

Spinning reels / Bolognese reels / Match reels / Feeder reels
Carp reels / Long cast reels / Big fish reels

84 LINES

Braided lines, monofilaments, monofil and braided leaders

100 HOOKS

Hooks for non-predatory fish, hooks for predators, and eyed hooks

112 BOXES

Tackle boxes, bait boxes, hook boxes, float boxes and buckets

124 LAMPS

Head lamps, camping lamps

126 BAIT BOATS

Professional fishing bait boats

128 ACCESSORIES

Bite alarms, swingers, rod-pods, rod-rests, carp and universal accessories, terminal tackles, swivels, snaps, knives, pliers, catapults, indicators, nets, leads, and feeders

186 GARMENTS

Over and undersuits, caps, gloves

192 COMFORT

Chairs, sleeping bags, umbrellas, inflatable boats, rod cases, bags

200 LURES

Hard lures, spoons and spinners, soft plastics, lure kits, predator accessories

222 BAIT

Groundbaits, seeds, seed-mixes, pellets, boilies, aromas, artificial hookbaits

255 THE ONE

Premium quality range for carp hunters

POLE RODS

The fast development of coarse and match fishing has brought about a wide variety of pole rods. From the entry-level 4 m composite poles up to 8 m long high-tech pole rods, anglers will definitely find what they are looking for.

im12 Nowadays, IM12 technology is one of the most advanced technologies. IM12 carbon rods react dynamically to different levels of tow, and have a smooth fish playing action. No wonder professional anglers use IM12 rods with pleasure. Needless to say, we recommend these rods to any angler who loves tough fights that end with victory.

im10 When it comes to long tips and slim Bolognese rods, using a tight material is inevitable. The appearance of IM10 carbon has made it possible to create lightweight, comfortable poles, which react immediately to sudden bites.

im8 Poles made of IM8 carbon material are the pinnacle of the hobby category, and can be used effectively even in competitions. The quick-hardening steadfast material provides optimum performance throughout the entire fishing.

im7 The appearance of carbon fibers sprang up as a wildfire in virtually every area of life, in the fishing industry as well. With the IM7 carbon poles a new generation of fishing rods was introduced, which is able to compete with similar grade glass composite poles at lighter weight and smoother lines than the glass fiber rods.

im6 Rods made of IM6 carbon are lighter and slimmer than equivalent glass composite rods. In fishing it is vital that every part of our tackle work in perfect harmony to achieve good performance. Soft IM6 carbon rods play an important role in subduing the strikes of big fish.

mmv The essence of the MMV (Multi Modulus Variant) technology is that it uses both glass and carbon fibers at the same time. By varying the amount and direction of the individual layers, the parameters of the rods can be varied widely, so a bit robust, but strong poles and rods can be produced.

Energoteam
Blade Pole
fishing rod

Energoteam
Emerald River Pole
fishing rod

Steady Grip

Varnished handles can be slippery with wet hands. On the handle of these poles, a surface is applied to help to hold our fishing rod with more secure hands.

Tubular Tip

The hollow structure makes these fishing rods more lighter and more elastic.

Elastic

The rod has an increased level of elasticity.

QUALITY FIRST AND FOREMOST

Development of our equipment is supported by our competent specialists and the outstanding match anglers of our country who are aware of the continuous development of sport fishing and the challenging requirements arising from this development. Knowledge of the material and technique, but especially knowledge of angling, is a great help for our experts in the development of the right products, so that only perfect products are offered for anglers.

BOLOGNESE RODS

The structure of bolognese rods is similar to pole rods, but they are equipped with a reel seat and guides. These rods are mainly used in river fishing and also in deep mine lakes.

im12 Rods with IM12 carbon feature legendary fish playing action that you've come to expect from premium rods. These rods are preferred by professional anglers due to their stiffness and added strength. We would highly recommend these rods to all anglers, as they will definitely tame even trophy sized barbels.

im10 The combination of quality raw materials and modern manufacturing technology makes IM10 carbon rods the best in their category. The IM10 rods feature perfect finesse and added strength. These slim and light rods are powerful enough to subdue big fish easily.

im8 When it comes to Bolognese rods, using tensile materials is of great importance. With the introduction of IM8 carbon, lightweight, comfortable rods have been created, which enable anglers to respond quickly to sudden bites.

im7 Since IM7 carbon was introduced in fishing, the weight of fishing rods has decreased. These graceful rods are more comfortable and faster, thus, they are more effective than their predecessors.

im6 Rods made of IM6 carbon are lighter and slimmer than equivalent glass composite rods. In fishing it is vital that every part of our tackle work in perfect harmony to achieve good performance. Soft IM6 carbon rods play an important role in subduing the strikes of big fish.

We often need to hold our fishing rod with wet hands. In order to avoid any damage to our tackle, the handles of Bolognese rods have a very thin, skidproof coating, which allows direct contact with the rod.

MATCH RODS

Match rods have become extremely popular among anglers who love float fishing. These three section rods feature fast action and added strength. Slim, flexible match rods make fishing more pleasurable than ever.

im12 Precise feeding and casts can significantly increase the number of bites. The quality of your fishing rod has a great effect on the accuracy of your cast. IM12 carbon features lightness and stiffness at the same time, which helps you launch the bait a long way with precision. They react dynamically to all levels of tow, and have a smooth fish playing action.

im10 When pursuing big fish with match rods it is essential that the slim blank has adequate power in reserve. Thanks to IM10 carbon technology a popular match rod family has been born. Their performance is impressive when it comes to playing fish that fight like demons.

im8 The introduction of IM8 carbon has opened new doors for anglers using light tackles. Thanks to their action and quality, slim IM8 rods will live up to the expectation of devoted match anglers who want to catch big fish.

im7 IM7 carbon has made it possible to decrease the weight of fishing rods. These slim rods allow more comfortable and faster fishing. The benefits of these rods are most noticeable in match fishing, especially when you have to scale down.

im6 Rods made of IM6 carbon are lighter than equivalent glass composite rods and feature a perfect fish playing action.

mmv MMV composite is used less frequently for making match rods. In the production process, the number of layers and the direction of fibers can be varied, so that different rod types can be made. These versatile rods can be used in various fishing situations.

”

During competitions I often have to use match rods. Fortunately, this is one of my favorite methods, so I always use them with great pleasure. In deep waters I prefer using a slider. Energofish offers a wide variety of match rods with different features so that everyone can find the rod that best suits them and the fish they want to catch. My personal favorite is the Elite Match hallmarked by my name.

FEEDER RODS

Using feeder and picker rods is getting more and more popular among anglers. The sensitive tip indicates even the shyest bites, which increases the chance of a successful hook set. Among the feeder rods that Energofish offers, you can find entry-level, composite feeder rods and prestigious feeder rods too. Composite rods might be the best choice on stony river banks, whereas our premium products can be used successfully in fishing competitions.

im12 During feeder fishing, and especially during competitions, everything depends on long and accurate casts. Due to the impeccable production process, rods made with IM12 technology offer outstanding quality. IM12 feeder and picker rods will rise to the challenge even in the most prestigious competitions.

im10 Premium IM10 carbon rods can tame any giant carp without difficulty thanks to their impressive fish playing action. The flexible backbone of the rod is designed to achieve precise casts. Accurate casts are not a dream anymore!

im8 IM8 carbon rods perform well when you have to cast the line to the coveted place. Also, you have more control in fishing thanks to their excellent fish playing action. The bigger the fish on your hook the more it bends.

im6 **im7** With rods made of IM6 and IM7 carbon fibers, feeders can be cast further than with similar category composite rods.

mmv **fine** These rods are more resistant to knocks and bruises than their carbon counterparts, so they might be an excellent choice for barbel fishing on stony river beds.

CARP RODS

Besides our high quality carbon rods for professional anglers, we also offer entry-level rods with an unbeatable value for money. These rods are for young people who want to learn the intricacies of this method. Be it two or three sections, everyone can find the rod they are looking for.

im12 Rods used in fishing competitions are subject to high levels of tow because of wild carps. Under these circumstances, it is essential to use a rod that always performs well. This is when IM12 carbon comes into the picture. IM12 fishing rods will certainly match the expectations of professional anglers as they deliver maximum performance.

im10 Using carp rods that are made from IM10 carbon, we can effectively fish from the shore or go boilie fishing. These rods perform an amazing bend, and react dynamically to the strikes of big fish.

im8 IM8 rods are slimmer, but also stronger than any other previous rods on the market. They feature outstanding strength and perfect fish playing action. Chances of losing the fish are low. You can use them from the shore or on a boat.

im7 IM7 carbon rods feature an impressive fish playing action that can tackle any fish. They absorb the strikes of trophy sized carps and grass carps easily, which reduces the chance of the fish breaking the hook. These attractive rods are lighter than glass composite rods.

im5 When you're carp fishing from the shore, your rod has to subdue the aggressive attacks of wild fish. If your rod is flexible enough, you can prevent hook pulls. Soft IM5 composite rods prevent the fish from tearing itself free.

MULTI SECTION RODS

Two and three section rods are great classics in the fishing industry! Anglers love them mostly because of their versatility. They can be used both for bottom fishing and floating. As there is only one joint on these rods, they are immensely strong and can absorb the fearsome power of big fish. You can pursue predatory or non-predatory fish with them. Generally, they are moderate action rods.

im7 The material used in the production process is soft, and at the same time unbelievably strong. With IM7 rods you can improve your casting distance and accuracy. They feature an impressive fish playing action that can tackle any fish.

mmv Despite the fact that fiber technology is developing rapidly, the traditional two section composite rods are still quite popular today. These durable rods offer an unbeatable value for money. Their character is softer than that of carbon rods.

TELESCOPIC RODS

Telescopic feeder rods have been loyal companions to anglers for decades. Thanks to the latest materials and modern manufacturing technology, nowadays these rods are enjoying their renaissance. They feature quality carbon and a sophisticated set of guides.

im8] With the appearance of IM8 carbon technology, classical telescopic rods have undergone significant changes in both their look and quality compared to the previous models. These graceful, strong rods can be used universally for any classical fishing technique, depending on the cast weight of the selected model.

im6] You can often find IM6 rods among the fishing tackle used for classical bottom fishing. Although the material used in the manufacturing is soft, IM6 rods can endure the strikes of record breaking fish. IM6 rods deliver a smooth fish playing action. They are ideal rods for reaching long distances with a great degree of accuracy.

im5 The appearance of carbon fibers sprang up as a wildfire in nearly every area of life, so did it in the fishing industry. With the IM5 carbon rods a new generation of fishing rods was released, which is able to compete with similar category glass composite rods at lighter weights and smoother lines.

MODERN METHODS WITH TELESCOPIC RODS

Who said that the time of telescopic rods is over? Our answer is: NO! Why not use a modern terminal tackle on your good old telescopic rod? If you have a rod that is sensitive enough, you can scale down, and put a 0.20 mm line on your spool. This is almost like the line than you use on feeder rods. Take a short method rig or a pellet feeder as a basis.

SPINNING RODS

As a result of lighter, more easy-to-handle fishing rods, spinning is at the height of its popularity. The joys of spinning are aggressive strikes and direct contact with fish that fight like demons. Sudden strikes make every angler's heart beat faster!

im12 **im10** The IM 10-12 technology has been a major step forward in the manufacturing of spinning rods. The characteristics of these weightless fishing rods, such as the sensitivity of the tip and their strength, can be adapted to the

needs of different fishing situations by changing the material and the carbon fiber used in the production. Even the tiniest flutters of the lure and the smallest nibbles can be felt perfectly. They take up the fight with any kind of fish.

im8 The IM8 spinning rods are among the most popular models. They feature outstanding quality and a tip indicating every flutter of the lure and even the shyest bites. The easily bent material stiffens up quickly allowing you to play the fish quickly and effectively even in waters full of snags and weeds.

fine The sudden attacks of huge, especially predatory fish put a great burden on every part of your tackle. Composite rods are able to withstand high levels of tow and reduce tension on the line and the leader.

”

I've been fishing since I was five. In my childhood I would chase small and big fish with my friends on the Dabube and on tiny little streams too. I love all methods for catching predatory fish. However, spinning is my personal favourite. If I had to choose one particular method, it would be wobler fishing for zander and catfish during the night.

BIG FISH RODS

Fishing for big fish is demanding both for you and your tackle. If you pursue giant monsters, you need a fishing rod that can withstand extreme levels of tow. Our catfish rods serve exactly this purpose. Of course, not just catfish anglers can enjoy the benefits of these marvelous rods. We would recommend them to other types of fishing too.

im10 im8 During fishing for huge fish, it is essential that the rod has adequate power in reserve. The high-quality carbon fabric used in the manufacturing process equips the rod with all abilities that help devoted anglers to win the fight against the most fearsome giants.

im7 im6 The strength of rods made of IM6 and IM7 carbon material is almost the same as the strength of rods belonging to higher IM categories, but these rods are harder and more robust.

Thanks to Kevlar fiber reinforcements IM8 carbon material has enormous power in reserve. The manufacturer has managed to produce rods that are extremely durable and can be used under the most difficult circumstances to pursue trophy sized fish.

fine Rods that feature the latest composite technology are perfectly suited for fishing under extreme conditions. The durable material can withstand dynamically changing tow when you're playing aggressive big fish.

I've been fishing for catfish since 1990, and I'm trying to find out every intricacy of it. I use all the catfish methods. Which method is the best is hard to tell. It always depends on where the catfish are, the season and the time of the day. My biggest catfish was over 80 kg, but I only fish in Hungarian waters. As far as I'm concerned the size of the fish is not that important. I

prefer catching many catfish throughout the year to catching one big catfish. I can be happy with a 8-10 kg catfish on the hook. Of course, if I could choose, I would choose the bigger ones.

SPINNING

Devoted spinning anglers choose their reel with special attention. The reel should be light, smooth and durable. We bore

in mind these demands when we were making this year's spinning reel range.

THICK BAIL ARM

A reinforced bail can give extra stability to the rotor of the line roller. It is durable and less likely to deform unlike traditionally designed reels.

SMOOTH DRAG

You can enjoy the advantages of smooth drag systems with thin lines and when there is a vehement fish on your hook.

CARBON-POLYMER BODY

This is a very interesting mixture of materials, which produces a really light yet strong alloy. We can get top quality for a reasonable price.

PERFECT LINE LAY

A perfect line lay is an important criterion for reliable spinning reels too. Good line lay results in more accurate casts, not to mention the fact that our line will not twist.

SHALLOW SPOOL

You have to put hundreds of meters of thin line on normal spools. Shallow spools, on the other hand, make it easier for you to economize on expensive fishing lines.

LIGHT SPOOL

We can fish with a rod in our hands all day! Every part of the equipment has to be light, so does the reel. A lightened spool means a big help.

WIZARD ASP HIGH SPEED

6,7:1
GEAR RATIO

PRECISION

BALANCED DRIVE
SYSTEM

6+1
BALL BEARINGS

You have to keep pace with asps when you're leading the bait. The best fishing reel on the market for this purpose is one with a high gear ratio such as the Wizard Asp High Speed. The gear ratio of the reel is 7.1:1! Yes, with one single turn of the handle, the rotor turns around the axis more than seven times. Therefore, the greatest advantage of the reel over normal spinning reels is that it makes fast retrieving possible. Not only is this good for asps, but also it spares our hands because we don't have to reel fast to reach the right speed. Six bearings and an extra one way clutch ensure smooth running.

L&K PRO GUIDE

The Pro Guide is a light but tough reel. It is suitable for UL spinning, but it is massive enough to succeed under more difficult conditions too. It features a strong rotor, a thick bail arm and precise joints, which prevent the handle from clucking. In the manufacturing process, metal was used for making the spool and the handle. The Pro Guide has an exceptionally smooth drag system.

WIAZRD SAMURAI SPIN

Many anglers are already using the Wizard Samurai spinning rods successfully. The Samurai Spin reel is a new member of the series. There could be no complaints about its appearance, as it's been given a neon green style that suits the series. The reel features a lightened body. Besides the aluminum spool, the handle is also made of metal. The knob ensures comfortable grasp even after hundreds of casts, which is a considerable characteristic of good spinning reels.

WIZARD SPIN

 **g**  **mm / m**

Nowadays Ultra Light Spinning is spreading very fast and the equipment to this method is evolving explosively. This reel can be a good choice for UL spinners, but at the same time it is also suitable for traditional jig or wobbler fishing. The light weight is coupled with massive internal structure and precise drag system. Thanks to the shallow spool you don't have to use backing line not even with thin braids. The reel features 6+1 bearings and 5,2:1 gear ratio.

KAMASAKI THUNDER FD

Sometimes a beginner level reel does make wonders. The perfect example of this is the Kamasaki Thunder fd, which is a compact, super light reel. It features two ball bearings, which ensure smooth running. Besides spinning, you can use it for float fishing or light bottom fishing. It may be an excellent choice for beginner anglers or kids as it is an extremely durable reel.

MATCH

Match fishing is at the top of float fishing. Choosing the right reel is as important as choosing the right fishing rod. High gear ratio, smooth running, flawless drag system and shallow spool are just a few criteria of a good match fishing reel.

PERFECT LINE LAY

SMOOTH DRAG

In match fishing, you often have to cast you float a long way off the shore. With a good line lay long and accurate casts are guaranteed.

When you're playing the fish your reel has to work smoothly. In the case of match fishing, this is particularly true, as most of the time thin lines are used.

BLACK FIGHTER MATCH

Although we would recommend it primarily to match anglers, it can be used for picker, feeder and basically any type of angling that requires a reliable reel. It features 5+1 bearings and a light spool.

BOLOGNESE

In Bolognese fishing you don't have to use a large sized reel, as the reel is basically for storing the line. That's why the reel doesn't have to be big. Actually, it's better if it's small and light with a precise drag system.

Because of the thin lines a super sensitive drag system is a must. That's why some of our reels are equipped with micro adjustable drags.

ENERGOTEAM BLACK FIGHTER BOLO

A precise reel with a reliable internal structure. It features a lightened aluminum spool, 5,2:1 gear ratio and a wear-resistant line roller. The precise front drag system has giant washers and a balanced oscillation system that gives exceptional abilities to the reel. It is ideal for Bolo and ice fishing. 5+1 ball bearings.

ENERGOTEAM SUPREME BOLO

Not only does the Supreme family have quality rods, but also a marvelous reel. The 5+1 ball bearings with a precise internal structure are manufactured only in size 500. Because of its light weight it is ideal for Bolognese fishing or ice fishing. The Supreme Bolo features 4,8:1 gear ratio.

KAMASAKI SUPER BOLO

The Kamasaki Super bolo RD 100 is a small sized reel which is immensely light. It is made of graphite [housing and spool]. In the inside you can find the driving mechanism with two ball bearings. It delivers smooth running. The rear drag can be adjusted precisely and easily, so you can put super thin lines on the spool.

FEEDER

Besides match fishing, feeder fishing is also developing rapidly. Feeder fishing equipment has to hold on in difficult situations.

That's why Energofish has expanded its range of fishing reels. Now, you are able to select from a wide variety of feeder fishing reels.

PERFECT LINE LAY

One of the many secrets of accurate and long casts is an even line lay. Naturally, we can find reels that deliver perfect line lay in the feeder category too.

SHALLOW SPOOL

If you use shallow spools you don't have to spool up hundreds of meters of thin line. In most cases, 150-200 meters should be enough. This can reduce the costs of fishing.

THICK BAIL ARM

The rotor, the main shaft but even the bail of feeder reels has to be strong. If these parts are powerful enough your reel can easily withstand even greater loads.

LARGE WASHER DRAG SYSTEM

A reel equipped with giant drag washers has many advantages over their traditional counterparts. For example, you can adjust the drag precisely without sticking.

HEAVY-DUTY HANDLE

With a reinforced handle it is easier to reel in heavy terminal tackles from a distance. This reinforcement is also common on feeder reels.

FREE SPOOL SYSTEM

When you're fishing with two rods, it's recommended to use bait runner reels, so that you can adjust the drag with one move.

KAMASAKI
ELITE FEEDER

In feeder fishing you can use bait runner reels or traditional front drag reels. The Kamasaki Elite Feeder belongs to the latter category. Due to its design it is a bit different from ordinary reels. The Kamasaki Elite Feeder features an exceptionally large spool, which lets the line unravel freely. Therefore, longer casts are achievable. The large sized spool also contributes to the smooth unraveling of the line. With one single turn of the handle, you reel in 95 cm of line. The Kamasaki Elite Feeder is made of aluminum. Aluminum is a solid and wear-resistant material, but it is also a very light metal. Neither the spool nor the line will suffer any harm.

ARNO
INTRUDER FEEDER

Fortunately, we don't have to spend a fortune on modern feeder reels. The Intruder Feeder 6000 is an affordable feeder reel that will accompany you in your fishing adventures. This reel is a perfect choice for a light, medium light, medium or a medium heavy rod. The diameter of the spool is 60 mm, which allows thin lines [0,18-0,22 mm monos or 0,08 braided lines] to unravel freely. It also prevents the line from becoming tangled when it is stored on the spool. The reel features traditional felt drag washer. The diameter of the shaft is 5 mm, which makes the reel tight enough.

20113-600 390 0,34 / 120

CARP EXPERT

LONG CAST METHOD RUNNER

This Long Cast Method 6000 bait runner reel is the member of the Energo Team CXP series. It satisfies the needs of all the popular method and feeder techniques. It's available in LC design that is in a distance casting version. With the right casting technique and a proper monofilament main line, you can reach spots over 100 m.

CARP EXPERT

PRO POWER FEEDER

We recommend using this reel with medium-heavy or heavy feeder rods. Its spool makes it a magnificent long distance casting reel, but its durability can be exploited in river fishing too. The graphite housing delivers balance and satisfactory socket for the drive. The metal spool lets your line run smoothly. The metal handle serves a very useful purpose when retrieving.

CARP HUNTER

ALFA FEEDER RUNNER

This is a high-quality bait runner reel for everyday fishing at a reasonable price. Note, however, that it is not only a simple bait runner reel! It features a big spool, which helps you cast far. The diameter of the spool is almost 60 mm. What's more, it's tapered, which also adds distance to your casts. The handle of the reel offers firm grasp. The bait runner can be adjusted precisely. It has two ball bearings, which are placed in a light, but durable graphite housing. Ideal line: 0,20-0,22 mm mono.

KAMASAKI

SUPER RUNNER

We made our Kamasaki Super Runner reel for anglers who are getting acquainted with bottom fishing. The favorable price of the reel does not equal bad quality. An easy but exceptionally steady graphite body was given to it with a bait runner system that you can adjust precisely. You can adjust the main drag system by turning the knob delicately. It is a perfect reel for the method feeder, but also for traditional bottom fishing.

20915-050 355 0,40 / 120

20915-060 370 0,40 / 150

LONG CAST

Once a 100-meter long cast was only a chimera. Nowadays, with a proper rod and a reel you can achieve 140-150 meters.

There are no long cast reels with uneven line lay. A perfect, even line lay is probably the most important prerequisite for long casts.

Anglers usually use their long cast equipment with heavy feeders. To retrieve a heavy terminal tackle you need a massive rotor, handle and a reinforced bail.

To play giant carps you have to use a reliable reel with a smooth drag system. You need a reel that allows the line to run steadily.

As long cast reels have to endure extreme load, they are equipped with a reinforced handle. You will make great use of the handle when you're retrieving your heavy terminal tackle.

CARP EXPERT LONG CAST

Casts longer than a hundred meter require an exceptionally well-designed reel. The Carp Expert 9000 long cast reel will definitely meet the requirements for long casts. The reel has a large sized, tapered spool. Its lower diameter is 74 mm, whereas the diameter of the upper part of the spool is 72 mm. The drag system won't stick thanks to the giant washers. The line roller with ball bearings runs smoothly. The material of the bail's tube suggests power. The main shaft is 5 mm thick.

20201-900 720 0,40 / 380

CARP EXPERT NEO LONG CAST FEEDER

When using feeder rods, you can cast as long as you can, but you can also try the margins right in front of your feet. You can use thin monofilaments or strong braids. There is hardly any reel on the market that you can use for all the things we've mentioned. The Neo Long Cast Feeder 600, however, is one such reel.

FERENC KOÓS ON THE REEL HALLMARKED BY HIS NAME

"I used the predecessor of this reel the SI BANX for a long time. It is durable and can rise to the challenge in many fishing situations. Those who know me can tell you that I always look for tough fights. In these situations the reel is under extreme pressure even when there is only a 10-20 kg catfish on the hook. Not to mention the big ones! The indestructible metal structure of this reel provides enough stability to defeat monster catfish. Its line capacity is huge, so you can use it with thick lines. Or you can also spool up hundreds of meters of average line and cast your rig a long way."

KOÓS 12X SPIN BRAID

It is a line designed for tough fights. The strength of the 12 braided fibers guarantees high quality. Because of its enormous resistance to abrasion, it is extremely durable. Thanks to its dense braids, it takes up very little water, which is a great advantage when you have to cast your line a long way.

KOÓS 12X MONSTER BRAID

When it comes to catfishing, compromise is an unknown concept. The 12X Monster Braid was made in the light of this idea. The 12 fiber thread line, produced with the latest technologies, has incredible tensile strength. According to the newest requirements it is round-braided. Naturally, we can use it successfully under the most extreme circumstances.

KÁROLY BOKOR ON THE FISHING LINE HALLMARKED BY HIM

"Those who know me can tell you that spinning is my favorite predator method. I recommend the Full Contact line especially for spinning! Thanks to its 8 strand structure, the braid is very strong. The Teflon coating prevents the line from absorbing water and helps you cast long."

BOKOR FULL CONTACT BRAID 8

The Full Contact unites 8 strong yarns in a dense, circular cross-section. This spinning line, with its great breaking strength, meets all the expectations of anglers. It features high resistance, long lifespan and many other excellent qualities. The Teflon coating ensures very low friction. The line runs through the roller and the guides silently, without any tangles. The Full Contact can be characterized by high tensile strength, speediness, and flexibility. Water absorption is very low. The visible color of the line helps anglers spot every nibble. As its name suggests, it ensures full contact with the fish. The Full Contact Braid 8 will be your reliable companion when you're fighting with record breaking fish.

L&K MICRO BRAID

The updated version of the L&K braided line is ideal for ultra light spinning. The thinnest L&K Micro Braid is suitable for your finest, most sensitive spinning rod. Thanks to a new production process, the structure of the new line is more consistent and modern.

EXCALIBUR CATFISH 8 YARN BRAID

The Catfish Braid is braided of 8 fibers; therefore its surface is extremely smooth. The line is reinforced by a Teflon coating. The quality of the coating is guaranteed by DuPont. As the teeth of the catfish can cause a lot of damage to the line, a double Teflon coating is used. Its medium-brown color acts as perfect camouflage, even when you're trying to pursue catfish in weedy waters.

L&K FINE BRAID 8

The Fine Braid has been further refined compared to our other lines. Its structure, woven from 8 fibers, has a smoother cross-section and therefore its friction data are much more favorable. These are the reasons why you can cast longer and there's less resistance in the water.

EXCALIBUR PIKE BRAID

The Pike Braid is braided of 8 fibers; therefore its surface is extremely smooth. The line is reinforced by a Teflon coating. The quality of the coating is guaranteed by DuPont. Its other qualities, like its green color, make the Pike Braid a superb line for pike fishing. Practically, it doesn't absorb any water. Nowadays, this is one of the basic requirements of high quality fishing lines.

KAMASAKI SUPER BRAID

Thanks to the economical package, you don't have to worry about whether you have enough line on your spool or not. This saves you a lot of trouble, as you won't have to take off all the line that you've spooled up and put backing line on your reel. The Super Braid is the perfect choice for spinning, bottom fishing in tough conditions, boillie fishing or float fishing in reeds. Its strongest version has an enormous breaking strength, which makes it an ideal line for distance catfishing.

KAMASAKI SUPER BRAID

Braided lines can be applied in many different fishing situations. They can be used as hook links, leaders or even mainlines in spinning, feeder fishing, carp fishing, or floating near the river bank. Therefore, the line supplied in 1000 m spools might not be the most economical choice for you. On the other hand, the 100 m line offers an optimal quantity for these methods.

MONOFILAMENT FISHING LINES

Heavy-Duty
hook will get into the landing net. Don't be afraid to use lines with a diameter that is larger than the average.

Low visibility
Fish are cautious, especially huge specimens and predator fish that have excellent eyesight for catching their prey. If you start chasing them with a low visibility line, your chances of catching these giant monsters will be doubled.

UV resistant
We can use UV resistant lines to eliminate the harmful effects of the sunbeams damaging the structure of our line.

EXTRA Soft
Fishing with soft lines is a joy. The cast is smoother and longer than in the case of average fishing lines. In addition, soft lines absorb a huge amount of energy during playing the fish. They are suitable both for float fishing and ledgering!

EXTREME tightness
When the water is full of snags you can't afford losing control of the fish. You will definitely appreciate the enormous strength of these lines in snaggy waters. The fish will turn out from the snag smoothly.

FLUORO carbon
Available quality! It is harder and more wearproof than traditional lines. Its application is manifold. It can be used as main line, or leader for predators, but it is not unusual to use it as a boilie rig either.

ABRASION-resistant
If you fish a lot, the wearproof coating comes in handy as it makes your fishing line more durable.

Low stretch
You can experience its real advantages in long distance casting. Stretch is minimal, which equals more direct contact with the bait.

SINKING line
The most fundamental part of waggler and feeder fishing is a good quality sinking line.

LONG CAST
With a soft and smooth line you can put more distance into your casts. This cannot be achieved with average fishing lines.

SUPERIOR knot strength
Like it or not, the line is weakened by knots. Or is it?

CARP EXPERT METHOD FEEDER TEFLON

Successful method feeder fishing does not exist without an appropriate fishing line. All features of the Teflon coated Method Feeder Teflon have been designed specifically for this method: low stretch, excellent knot resistance, highly visible, dark grey color, and of course, the Teflon coating. The unique DuPont coating

improves the abrasion resistance of the line, and provides smooth line flow. Last but not least, the Teflon coating has a unique water-repellent character, which is very important when you're fishing the method feeder in cold water. As there is less water on the line, the guides of the rod will not freeze immediately.

FISHING WITH EXCALIBUR LINE IN SNAGGY WATER

Water lily, weeds or trees fallen into the water? The Excalibur fishing lines perform well even in such heavy terrains. Moreover, some of them have been designed specifically for such conditions. In these tough terrains it is very important that you choose a proper line. Your line must be strong, wearproof and stretch resistant. The Excalibur lines are available in handy 200-300 meter coils, so you have enough line to play the fish even after long casts. If you want to catch the fish of your life, don't rely solely on luck.

EXCALIBUR CARP CAMELEON

The name-giving of the Cameleon line is not accidental! In different light conditions it reflects different colors, so that the color of the line can adapt to the actual water depth and light condition. Its normal color is brown, which in harsh light becomes bronze, while in artificial light it seems to be bright green. This feature can help you during fights with fish at night. Its abrasion resistance and stretch have been adjusted to the requirements of carp fishing.

EXCALIBUR CARP CAMOU

In waters covered with plants, it is hard to make our line invisible. The Excalibur Camou line is of great help in such circumstances, thanks to its black and green color. Black color can be perfectly hidden in mud, whereas green color blends into reed grass. It is the perfect choice for practically all methods of carp fishing, such as feeder or boilie fishing. Its stretch provides an ideal help during fights with trophy-sized fish.

EXCALIBUR

CARP FLUORO CARBON COATED

Plenty of producers have manufactured fluorocarbon lines so far, but due to their price, they have been unavailable for many anglers. This deficiency is solved by the revolutionary Excalibur Fluoro Carbon Coated line. The basics of the innovation lie in the production process, where a clear monofilament is covered by a fluorocarbon coat. Thanks to this procedure, its stretch is lower than the stretch of traditional monofilaments. This can be a big advantage in snaggy waters. The number of unsuccessful hook sets will drop significantly, too!

EXCALIBUR

CARP FEEDER FLUO ORANGE

Many anglers are afraid of using fluorescent orange colors. This product has been designed for them. It is known that orange is invisible for fish in shallow water [a few meters deep]. Although this line is invisible for carps, above the water it can be seen excellently, which is of great help during night fishing. Its softness enables us to reach long distances, while its abrasion resistance can be useful in any snaggy water during fights with record breaking carps. Its material was produced in Japan, which is a guarantee for high quality.

ENERGOTEAM
POWER METHOD FEEDER

Feeder anglers can now choose from a variety of fishing lines. According to anglers it is important that the line should have low stretch. Furthermore, it should be strong and resistant to knots and abrasion. The Power Method Feeder meet all these criteria. It's a sinking line made from heavier copolymer.

ENERGOTEAM POWER ULTRA

A universal fishing line, whose unique features can be exploited in difficult, snaggy waters. Thanks to the use of special admixtures in the production process, an abrasion-resistant line with high breaking strength was born. The Power Ultra is ideal for heavy-handed fishing with extreme requirements.

ENERGOTEAM POWER FEEDER

This modern fishing line is made of fast sinking copolymer. The Power Feeder can be characterized by abrasion-resistance, added strength and at the same time superior sensitivity. The special coating makes the line surprisingly castable. Its stretch is negligible, so it indicates even the shyest bites. Solid hook sets are guaranteed.

ENERGOTEAM POWER WAGGLER

An excellent sinking line is indispensable to distant float fishing. The material of the Power Wagglar was produced with the use of heavy copolymer, which preserved the sensitivity and high breaking strength of the line. It does not change its shape even if you use it regularly.

150 m	mm	kg	150 m	mm	kg

ENERGOTEAM POWER SPINNING

During spinning a line with low stretch and high tensile strength is a must. Moreover, your line has to be abrasion-resistant and has to convey every movement of the lure. Thanks to special materials and copolymer technology, the Power Spinning is super flexible. This wonderful line with superior sensitivity meets every requirement of spinning.

33530-040	0,40	18,26

ENERGOTEAM SPECIALIST CARP

This line meets the special requirements that you need when you're pursuing giant, non-predatory fish. It features enormous breaking strength and an extra-soft character. The Specialist Carp is abrasion-resistant, thus, it is the ideal choice for fishing in snaggy waters full of weeds.

33200-016	0,16	3,57	33200-030	0,30	11,40

33200-025	0,25	8,01			

ENERGOTEAM SPECIALIST PIKE

This line features a dark tone, great breaking strength and high abrasion resistance. The Specialist Pike has been developed specifically for fishing in snaggy waters with fallen trees and reed grass. It can be successfully used in traditional fishing both with live baits and artificial baits.

33220-020	0,20	5,04	33220-035	0,35	14,47

33220-030	0,30	11,20			

ENERGOTEAM SPECIALIST CATFISH

Fishing for catfish requires heavy-handed fishing and a line that exhibits more strength and abrasion resistance. The Specialist Catfish helps you fight and defeat fearsome catfish. It is excellent for spinning, bottom fishing and, according to anglers' experiences, you can also use it as a leader in boilie fishing.

* Length: 135 meters.

L&K ZANDER SPIN

We could call it a "night spinning line", as it features high-visibility. It is the best choice when you're fishing at sunset, at dawn or during the night. American anglers have been using this color for many years in poor visibility conditions. This unique color helps you define the exact direction of the line, and it also reveals in which direction the fish is heading. The Zander Spin is extremely wear-resistant and its stretch is ideal for spinning. Once you fall in love with it, you will never choose another line.

KAMASAKI SUPER MONO

An extremely durable line with enormous breaking strain. Because of these advantageous features, it's worth choosing the Kamasaki Super Mono. Although it's not a very soft line, it is unbelievably resistant to knots and it offers minimal line stretch. This may come in handy when feeder fishing as the Super Mono can indicate bites more directly. Also, it is much easier to prevent the fish from getting into the reed.

ENERGOTEAM CARP HUNTER

The Carp Hunter bulk spool lines are produced in several colors and with different features. There are some which resist the harmful UV radiation, but you can find striking yellow ones which are extremely useful in night fishing. There are also Carp Hunter lines for feeder and bottom fishing with low stretch and abrasion resistance.

HOOKLINKS

Choosing the right hooklink requires thorough consideration. We have to define the method we want to use, the size of target fish, the obstacles under the water and

the shells or rocks on the bed. But even if we take all this into consideration, we still can face several problems.

SKIN
coating

The advantage of coated hooklinks can be experienced on terrains where our line runs between underwater obstacles or where shells hinder fishing. To make knot tying easier, you can remove the coating with your nail or a peeler.

ICE-
resistant

In winter fishing the water often freezes on the line, which can significantly reduce its flexibility and strength. There are special types of fishing lines that are more resistant to cold. These lines can be used safely in the winter.

ENERGOTEAM POWER WINTER

In the production process of this special monofilament leader, tough weather conditions were taken into account. Accordingly, the line can be used safely in temperatures below zero [Special Ice Formula]. The Power Winter is invisible in the water. It can be characterized by softness and high knot strength.

BENZAR MONO LEADER

The Mono Leader is hallmarked by Zsolt Benzár. It is an outstanding line on the market thanks to its incredible softness. We can take advantage of this unique feature mainly when the fish are less active. In these situations, the fish take up baits which move more freely. This is the favorite leader of the Energofish Feeder Team!

SZILÁRD SZILVÁSI ON THE CHAMPION FISHING LINE

I've been chasing fish since my childhood. Moreover, fishing has become my profession. After I had tried many kinds of fishing lines, I established the criteria of a good fishing line. These criteria are embodied in the Champion line, which we have developed in cooperation with Energoteam. It features low stretch, which allows it to indicate every little nibble. It performs very well in competitions too. With the Champion even you can be a champion!

ENERGOTEAM CHAMPION FEEDER & PICKER

A unique fishing line, developed especially for feeder and picker fishing. The top quality Japanese polyamide base and the special fluorocarbon coating equal a high-performing line, which is not willing to make any compromise. The coating not only improves the line's abrasion resistance, but also adds significant distance to your casts. Its reddish-brown color easily blends into the riverbed, and provides an excellent opportunity for the use of white line markers.

KAMASAKI SUPER BRAID LEADER

HOOKS

Hooks are probably the most important part of your tackle! When you're playing the fish you have to be sure that the hook

holds tightly. To achieve a solid hook set, you have to use a hook that is appropriate for your method, tackle and target fish.

Special hooks made with bent shanks. They are used mainly with soft plastic lures – especially shads and grubs. These hooks are ideal for spinning or the drop shot method.

Spearpoint hooks have been used since the very early days of angling. The development of manufacturing technology has brought about new sharpening techniques, such as laser or chemical sharpening. These modern processes make spearpoint hooks unbelievably durable. Furthermore, they provide solid hook sets.

A very unique point design. There are three slits from different angles, which makes the hook sharper and more durable.

These hooks are referred to as offset point hooks. Their point and throat subtend an acute angle. Because of their outstanding penetration and fish-holding qualities, they are excellent for several fishing techniques.

Micro barbed hooks are preferred by match anglers and sports fishermen who do care for fish. Compared to hooks with average barb size, one of the main advantages of micro barbed hooks is that you can pull them out without injuring delicate-mouthed species.

One of the most popular barb types, whose size depends on the shape, size and usage of the hook. An optimal sized barb always ensures perfect hooking and holding, and protects the fish from injuries. Thus, gentle treatment is ensured.

There are special hooks that are equipped with extra micro barbs. These miniature barbs are mounted under or in front of the normal barb. This unique feature has two main functions. Firstly, it prevents the fish from ejecting. Secondly, it holds your bait firmly, even if you're using less hook-proof baits.

As their name suggests, D-Killer hooks are super sharp hooks with lightening fast penetration. Their point is bent along the plane, which delivers firm hooking. Also, D-Killer hooks feature outstanding holding abilities.

These hooks are mainly used in predator fishing. They feature an elongated shank with one or several barbs. The holding ability of these hooks is truly amazing. They are loved by pike and perch anglers as chunks and fillets do not come off the hook. Their enormous potential can be exploited in fishing for non-predatory fish too.

If you want to defeat aggressive monsters in tough conditions, it is vital to have a strong and massive hook made of the best material possible.

The shank of these hooks is flattened from both sides. Thanks to their shape these hooks are capable of enduring extreme load. They are an ideal choice for chasing giant fish, especially if the water is full of snags and water weeds.

Spade end hooks have been used for hundreds and hundreds of years. In the case of small sized hooks, the spade end shape proves to be an unbeatable choice. With the appropriate knot, they provide durability and perfect holding.

Eyed hooks are usually used in feeder and boilie fishing. They are usually medium and big size hooks, but nowadays eyed hooks are also available in smaller sizes. One of their unique benefits is that they can be tied easily with a simple clinch knot. These reliable hooks help you tie your hair rig without any tangles.

This is the modern, bent version of the ringed shank, which is popular among carp and feeder anglers. Provided you use an appropriate knot, the bait will definitely stay on the hair rig. These hooks deliver solid hook sets.

The eye of the hook has been made wider, which improves the movement of the lure in swivels, Cheburashka rigs, and winged jigs. Therefore, you have more chance to catch fish.

Knotting the hook will not make the breaking strain of your line significantly lower, so you have a bigger chance to land the fish.

MARUTO HOOKS FROM JAPAN

More than 100 years of experience is considered quite unique in tackle manufacturing. The Japanese Maruto is well known among Hungarian anglers. Be it boilie fishing, feeder fishing or predator fishing, you can hardly miss any fish with the

Japanese Maruto hooks. You can find various types of hook in our offer. However, the most interesting ones are probably the hooks from the Japanese domestic market. It's worth taking a good look at them.

BOXES

Round box, square box, lure box, tackle box, removable inner tray or accordion-like opening... You can choose from a variety of products to find the right one. In addition to fishing boxes, we also offer live

bait and groundbait buckets. These products are made of high-quality plastic, which makes them flexible and prevents them from breaking.

All of our lure boxes are twister resistant, so that you can store your grubs in them without any trouble.

You can sort out your twisters according to the different types, and the material of the box will not wear away. Among our products you can find special boxes with practical dividers that you can adjust any time.

There must be a lot of fellow anglers who looked like a drowned rat after a heavy rain. Drying your clothes, however, is the least of your problems in that situation. When it's raining heavily, the water can easily get into your plastic box and destroy your spare tackle. To avoid this kind of inconveniences, we recommended that you choose one of our rainproof tackle boxes!

LAMPS

Lamps are essential for night fishing. It is not enough to have enough light to change your bait and fix your rig. Your spot should be illuminated too. To help you become successful in night fishing, we offer a

wide variety of head lamps, camping lamps and lamps for tents. The main features of our lamps are high performance, energy saving and modern design.

2 LED

3

2017 NEW

VENUS

2000 LUMEN

IP44

ZOOM

BATTERY

CHARGING

Normal, rechargeable head lamps have their batteries in the front, behind the LEDs. However, in the Venus, the battery pack is on the back side of the elastic band, behind your head. This special arrangement delivers perfect balance and makes the lamp comfortable to wear. During fishing, the Venus stays on the head. The high-performing zoom function of the lamp allows you to spot distant objects.

74957-012

MERCURY

2000 LUMEN

IP44

BATTERY

CHARGING

3

The Mercury is able to illuminate objects that are several hundred meters far from you. There are fishing situations, for example in catfishing when the buoy is 100 m from the shore, where this unique feature of the Mercury can make fishing more successful. The zoom of the lamp is adjustable so that you can check near or remote objects.

74957-013

2017 NEW

4

3 LED

2017 NEW

SATURN

2000 LUMEN

IP44

BATTERY

CHARGING

This is a reliable high-quality head lamp with three LEDs. The Saturn has four brightness settings. At high, it produces 2000 lumens. The body of the lamp is made of aluminum. The battery pack is placed on the back of the lamp and has a socket for charging.

74957-027

CARP EXPERT

NEO USB RECHARGEABLE HEADLAMP WITH MOTION SENSOR

74956-550

74990-200

NEPTUN 3 LED

A practical drop proof headlamp with three [two white and one red] LEDs. It works with 3 AAA batteries. Thanks to its adjustable design, you can use it for baiting and playing the fish.

74940-371

74940-373

MARS 2 LED 3

2 LEDs and 3 settings help you play the fish in perfect brightness and change your bait in the dead of night.

URANUS 2 LED 3

This unbelievably lightweight head lamp can be the best choice when you're changing your bait or fighting with fish during the night.

74991-015

SOLAR

The Solar is a practical camping lamp with multiple LEDs, which can charge any USB device. It produces 900 lumens, which delivers enough brightness to your spot during the night. The lamp features built-in solar charging.

74991-031

COMET

The Comet is a traditional but very practical lamp that you can place right next to your fishing rod or can hang in your tent. We recommend bringing spare batteries with you to avoid inconveniences.

74991-129

VECTOR

The Vector features 12 LEDs. You can place it on the ground or hang it on any object to illuminate your fishing spot. The built-in compass will show you the right direction to huge night monsters!

LAMPS

BAIT BOAT

Bait boats are considered one of the deadliest weapons in modern carp fishing. They combine traditional methods and high technology. With the help of these boats, you can reach distances that you would never

achieve by casting. What's more they feature punctuality, comfort and easy-to-handle design. Those anglers who have already used them know that quite often there is a bite before the boat gets back to the shore!

CARP EXPERT
SPEEDY BAIT BOAT
1001

The 1001 version of the Carp Speedy bait boat has two shafts and parallel hull, which is also called catamaran. Thanks to its outstanding stability, it navigates without tilting even in strong wind and big waves. Its load capacity is 2 kg per chamber. The chambers can be emptied separately with the help of the remote

control. The boat can deliver two baited hooks. Power is provided to the two motors by a 10 Ah omni-sealed lead acid battery. The working time of the battery is 1,5 hours. The boat is available with GPS or fish finder. With other bait boats or casting these distances were unreachable.

With the Carp Expert Speedy bait boats, you can achieve 500 m, although in this case it's worth choosing the ones that features GPS navigation.

If you want your boat to get back to its pre-adjusted starting point, all you have to do is push one button. When the boat is going back, you don't have to worry about steering. You can tighten your line and put the swingers on.

Both propellers feature a special coating which prevents kelps, and more importantly, your main line from getting tangled. A simple but perfect solution to avoid nuisances.

With the help of the remote control, you can steer your boat (with your terminal tackle and feeding bait on it) to the right position.

Fishfinders help you map out the bottom of the lake and the exact whereabouts of the fish. They can be one of the greatest advantages during fishing.

With the help of the GPS your boat can memorize 9 different points. You can navigate through these points by pushing one button.

**CARP
EXPERT**
Speedy
1003

CARP EXPERT
**SPEEDY BAIT BOAT
1003**

The 1003 Carp Expert Speedy bait boat features 2X2,5 kg bait capacity, which is considered unique among bait boats. The three hulls of this trimaran boat deliver unbelievable stability. You can use the Carp Expert Speedy in lake Balaton when you are not allowed to approach your terminal tackle because of the storm warning. In these cases, too, this bait boat will run through the waves and delivers your bait to the right position. Its

propellers are protected against kelp and tangles. Don't worry about steering. All you have to do is focus on fishing with all your senses. The range of the boat is 500 m. This distance can be fished only with the boat that features GPS, because the boat cannot be seen from the shore. Using these boats is easier than one might think. What's more you can find plenty of materials on the internet that help you.

ACCESSORIES

The most versatile category in our catalogue is definitely the "Accessories". Among our tackle, you can find bite alarms, rod rests, rod-pods, carp accessories, snaps,

knives and catapults. In general, these items are not basic elements of your rig, but still, quality accessories can increase the efficiency of your fishing.

ADIGE

WIRELESS BITE ALARM SET

We've already seen a few reliable bite alarms. However, there aren't too many of them that indicate the intensity of the bite. The Carp Hunter Adibe shows the intensity of the pull by flashing LED lights.

CARP EXPERT
ENZA BITE ALARM SET

The Carp Expert Enza features a fairly simple, but very reliable structure. On the screen, you can adjust the volume and the tone with two potentiometers. The different sounds help you identify which rod has a take.

ORIGINAL

MAKING DENSE PVA STOCKINGS QUICKLY AND ECONOMICALLY

With some practice, you can make PVA stockings in the blink of an eye – it hardly takes more time than preparing a method rig. After knotting the end of the PVA, fill it with the bait you are planning to use. Then, with the help of the plunger, make it as dense as you wish. Depending on the size of the stocking and your hand, unroll enough PVA to form a loop, and just simply tie it (as a simple over-hand knot). As the loop is not tight yet, you can position it to the right place by loosening and pulling the end of the loop. Finally, grab and pull the knot to make it ready. You can economize on PVA if you tie another knot few centimeters after the original one. Thanks to the second knot, you can immediately fill the PVA with the next portion of seeds, pellets or boilies. You can put the PVA stocking straight into the PVA bag, or you can use a baiting needle and pull the hooklength through it.

HEXA MESH

Recommended for larger particles, boilies, pellets. By chasing giant carp, Hexa is the first choice if you are looking for PVA mesh. With its larger eyes, the big size particles will explode easily around your hook when reached the bottom. Available in fast melting version.

Diameters: 25, 35 mm

ANTI RAFFELING

Recommended for heavy duty methods. Due to the special weaving process, the net itself is more stronger than the standard ones. when need to cast far, or must use larger bags, it is recommended to choos this model. Available in fast melting version.

Diameters: 25, 35 mm

MICRO MESH

Recommended for allround use. Can be used as a multi-purpose net, for micro pellets, groundbaits, boilies, particles or all kind of baits you want to use around your hook. Available in Fast and Slow melting version too.

Diameters: 25, 35, 45 mm

For modern carp angling, the most essential PVA products definitely are the Sytems. One must have the correct tools to carry, store and use the PVA mesh in the most professional way. Energofish tried to create the perfect item for all cases. Let's start from outside to inside.

FEEDING BOOSTER

You can easily increase the attraction of your feeder before you cast. Just one shot of the Benzar Fluo Booster, and your feeder will become more efficient than ever. When fishing in cold water, use the Benzar or Carp Expert CSL aromas instead of the Fluo Booster to achieve the same result.

CLOTHING

Clothes play an important role in fishing. We always have to dress according to the actual season. In the summer, this is not difficult at all, but in the autumn and in the winter you have to be careful what you wear. Comfortable underwear or a hat can offer

you a lot of comfort. The better you feel near the water the better chances you have to devote all your energy to fishing and recreation. Appropriate clothes help you recharge your batteries even in harsh weather.

COMFORTS

This category includes several products such as chairs, rod cases, bags and inflatable boats. They all serve the same purpose that is they make fishing a real recreation. After a long day of fishing all you have to do is tell your amazing fishing stories to your family. If you're planning to stay at the

lake for several days, you might want to carry your equipment in an organized way. The rod cases and bags could be very helpful in these situations. Our excellent chairs provide you with all the comforts that you need for enjoying the beauties of nature.

LURES

You have a lot of different choices when it comes to spinning. You can be successful with hard lures, soft plastics or spoons. Every lure has its own unique feature. If you want to find out

which lure to use in different fishing situations it might be useful for you to review the descriptions of the products. To become successful, you need to have as many lures as possible.

KAMASAKI JOINT WOBBLER

A lifelike, 10 cm long wobbler with an intense wobble and perfect movement in the water. This is one of the most traditional types. Everyone can learn how to use them. The jointed body has a perfect balance, which gives the lure a unique motion. That's why you can use it successfully in overfished waters. You can send it 1-1,5 m deep.

001	87255-801
002	87255-802
003	87255-803
005	87255-805
009	87255-809

KAMASAKI FAT SHAD WOBBLER

This 9 cm long lure is a bit bulkier than traditional shad shape wobblers. It is a shallow running model, which you can cast well and accurately. It goes 1-1,2 m deep.

001	87250-901
002	87250-902
003	87250-903
005	87250-905
009	87250-909

KAMASAKI

KAMASAKI WOBBLER 3-JOINT

The three section jointed lure will draw the predator's attention with its snaky motion. You can retrieve it 0,5-1 m deep.

001	87235-901
002	87235-902
003	87235-903
005	87235-905
009	87235-909

KAMASAKI SHAD WOBBLER

This is a 9 cm long real predator catcher. It can go as deep as 2 m. Its fantastic wobble has large amplitude, and delivers realistic imitation of injured baitfish.

001	87245-901
002	87245-902
003	87245-903
005	87245-905
009	87245-909

KAMASAKI FAT WOBBLER

It's a dumpy wobbler with super wide wobble. It can be cast well and accurately. With a slow retrieve it runs 0,5 m deep. Thanks to its perfect movement and wobble, predators are more than willing to catch it. Another key to its success is its amazing color. It's great both for pike and perch fishing.

001	87240-601
002	87240-602
003	87240-603
005	87240-605
009	87240-609

KAMASAKI
PERCH WOBBLER

A wonderful small size wobbler with super intense vibration. It dives as deep as 1-1,5 m when retrieving. It is available in various colors. Great for sander, especially near stony river banks and the margins.

KAMASAKI
PERCH 1-2 WOBBLER

This high frequency wobbler has a super tight wiggle. It can sink 0,5-1 m deep. The 3 cm model can deceive shy predator fish near small watercourses. Chubs, ides, asps and trout all love it! With a slow retrieve, the 4 cm version will definitely draw the attention of hungry sanders.

KAMASAKI
POPP WOBBLER

This 5 cm wobbler will trigger spectacular strikes. Above the seaweed you can expect pike attacks.

KAMASAKI
BUG WOBBLER

Despite its small body, it has a tight wiggle. We recommended it primarily for smaller predators. It goes 0,5 m deep.

KAMASAKI
MINNOW WOBBLER

Realistic bleak imitation. This 9,5 cm lure can go as deep as 0,5-1 m. It's primarily for sander fishing, but you can also expect pike and asp bites.

KAMASAKI
VERTIC WOBBLER

- 001 87220-503
- 002 87220-502
- 003 87220-510
- 004 87215-602
- 005 87215-604

This is the kind of wobbler that you can use effectively with the traditional cast and retrieve method. It provides a perfect wiggle when sinking and rising. It's the favorite lure of sanders, pikes, asps, but don't be surprised if a catfish attacks it on a hot summer day.

ABOUT WIZZARD SPINNERS

Thanks to their excellent motion, even beginner spinning anglers can be successful with these lures. Seasoned anglers know that it's always worth experimenting with retrieve. When using a spinner, it could be useful to stop retrieving for a second, imitating a falling leaf.

WIZARD SPINNER ET CLASSIC

A meticulously designed lure that produces an unbelievable vibration in the water. The Spinner ET Classic features a traditional shape. Using this lure you can expect any predators.

	N° 0	N° 1	N° 2	N° 3

WIZARD SPINNER ET TURBO LONG

The Turbo Long is a fast, high frequency lure. It is the updated version of the traditional "Longet" profile. The leaf shape delivers added turbulence and makes the lure more effective than ever.

WIZARD SPINNER ET V-MAX

Its main characteristic is the high frequency vibration and a bell shaped rattle mechanism, which makes predators hunt down your lure. It's a wonderfully versatile spinner; therefore, you can catch any kind of predator with it. Its first-class treble hooks allow excellent hook set and ensure secure holding.

KAMASAKI
SPINNER 'SPARROW '

It is well known among anglers that predators, especially pikes, are fond of areas that are full of overgrown weeds. Huge pikes are likely to hide near branches of trees, sunken boats or broken piers. Unfortunately, in such tough conditions it's easy to lose your lure. Losing your favorite rule has emotional as well as financial consequences. For this reason, you can get this wonderful spinner at a good price. The Kamasaki spinner is available in different sizes and shapes with the super effective scale pattern. The blade keeps whirling fast even with slow retrieve. It produces attractive, high frequency vibration in the water. Chemically sharpened, 2x strong treble hooks. Endurable, strong wire. Unbeatable price for value.

KAMASAKI SPOON DP

Spinner with large blade and an extraordinary motion. Thanks to its great vibration amplitude it is unbelievably effective in the water. Its smaller versions and sizes are ideal for catching pikes, whereas the bigger sizes could chase monster pikes and catfish.

ABOUT L&K FLOATING LURES

This plastic is made from a special material whose specific weight is different from that of traditional plastics. It can be very catchy because it does not lie at the bottom of the water. It draws the attention of the fish from above the bottom. It can be used with Cheburashka rigs in snaggy waters.

L&K FLOATING LONG FLY

Flavored, extremely durable floating lure. It features a traditional wormlike shape. It is available in two lengths: it has a 5 and a 7 cm version. Ultra light spinners will be happy with the smaller version of this lure.

	5,0 cm	7,0 cm
W	87185-001	87187-001

EVR	87185-301	87187-301
PINK	87185-302	87187-302

L&K FLOATING SHAD

This floating lure features two ribbings. On the body, the ribs are less intense, whereas on the belly they are more visible. Its shape resembles that of Shad plastics. It can be an extremely catchy lure when predators feed on wide minnows.

	6,0 cm	8,0 cm
W	87176-001	87178-001

EVR	87176-301	87178-301
PINK	87176-302	87178-302

L&K LIGHT SHOT

Its slim and light body resembles a grub. It has many thin ribs making it more attractive to fish. You can pursue small sized predators or large ones with it. The lure has

a bell-shaped end, which moves in perfect harmony with the thin body. Thanks to the thin end of the tail, the lure provides a life-like imitation in weak currents too.

L&K WARRIOR SHAD

Real Shad form. Thanks to the extenuated and ribbed tail the lure reacts to every slight movement excellently. Therefore, you can use it in lakes or waters with weak current. If you want to achieve stronger motion, try it in rivers or in any kind of flowing water.

	5,5 cm	7,5 cm

052	87072-052	87073-052

L&K POWER KICK

The tuck shaped tail will invite imminent strikes from aggressive predator fish. The slot on the back of the lure helps you hide Offset hooks. With hard-mouthed species, setting the hook sharply can't cause any problems to this fantastic plastic. You can pursue small sized predators or, with the bigger versions, powerful catfish.

L&K KICK

Its elongated body makes it look like a grub, although it's a bit chubbier. It has many thin ribs that make the lure more attractive to any kind of predator that swims! The oval tail enables anglers to use the Kick not just in still waters, but also in fast flowing rivers.

TIPS FOR RIGS

MANN'S SHAD

Soft shad with traditional shape. It was given a bigger-than-average, tuck shaped tail by the manufacturer. Thanks to the soft material and the resistance of the tail, it makes a super intense movement in the water. The extra soft material, which is typical of

Mann's soft plastics, gives a realistic motion to the lure. The flexible head is also quite durable, and it won't crack after you've rigged it up several times. The lure has a massive, V profile that you can retrieve marvelously. Low resistance in the water. Tail wiggles intensively.

MANN'S MANNIPULATOR GRUB

The tail is connected to the body, which gives a unique appearance to this grub. Thanks to this unusual design, the long tail, which is typical of Mann's lures, has lower vibration amplitude. On the other hand, it performs a tighter wiggle in the water than traditional models. Great for sander and pike.

MANN'S CTG TWISTER

Compared to its body, the CTG twister has a super long, soft tail. This lure reacts to every tiny little movement, and performs an attractive motion in the flowing water. It's definitely indispensable to spinning anglers. Besides the usual scale of colors, it is available in unique shades. The flashy, flickering grubs exploit the aggressiveness of predator fish. These lively colors will help you catch lethargic predators too.

KÁROLY BOKOR ON MANN'S PLASTICS

"I use different kinds of wobblers, but when it comes to soft plastics I use only Mann's products. I'd had the opportunity to try them out before they became available in tackle shops. Ever since I tried them I've considered these plastics the best. When fishing for sander, it's very important to present a lifelike lure. Mann's soft baits are perfect for this purpose."

MANN'S GRAB TWISTER

	11 cm
FCH	88020-403
MFCH	88020-428
P	88020-405
Y	88020-404
W	88020-401

Packing: 5 pcs

Its cylindrical, worm-like body ends with an enormous shovel shaped tail. These special features make the Grab Twister irresistible to sanders. If you retrieve it at the right speed, the vibrations of the bait will be very likely to reach predators that are looking for their prey in your area.

WIZARD
CHUB SPINNER

You can use it successfully in narrow, fast flowing brooks. A uniquely designed lure, which is the result of a special fusion. It's been developed for chub fishing. Basically, it's a combination of a spinner and an elongated wobbler. Its appearance is spectacular. The small size of the lure [8 gm] equals the size of the chub's prey fish. The treble hook at the end of the bait is super proof.

KAMASAKI
ECOPILKER

Combined with a fly, it's the essential part of classical dropper rigs for asps. An effective way of catching them all!

Wizard

PREDATOR ACCESSORIES

WIZARD MASTER JIG HEAD

One of the biggest advantages of the Wizard Master jig heads is that the shank of the hook is not thickened near the eye. So far, this thickened part has made using smaller plastics impossible. The lure has super sharp Japanese hooks. Fortunately, it is available in various sizes, so every angler can find the size that he's looking for depending on the method he prefers.

This compact fish finder is loved by both professional and beginner anglers. With the help of this equipment you can easily map out the water in front of you. The water depth, the deck, and the whereabouts of the fish are not a secret anymore. The device features a color display. The housing of the receiver has a shock resistant coating, so it's less susceptible to damage. The device can be used for identifying big and small-sized fish, water depth, water temperature, air temperature, the location of fish, and the weed and stones on the deck.

LURES

BÉLA LUKÁCSI ON THE BRAND DEDICATED BY HIM

"I always try to put some innovations into spinning. This is particularly true for lures, that's why the new Winged Jig and Flat Bait have appeared in the shops. These innovations are necessary for us to be successful even in overfished waters!"

BAITS

Anglers who want to be successful in fishing must know the importance of groundbaits. This is particularly true for the method feeder as in this technique only a small amount of groundbait is cast into the water. Nowadays, there is a wide variety of groundbaits made from different ingredients and

grain sizes. Furthermore, anglers can choose from numerous colors and flavors. The range is so wide that many times only seasoned anglers can choose the one that is best for the season and the species. If you think you need guidance, check out the recommendations of test anglers and manufacturers.

BENZAR MIX GROUNDBAIT GENERAL GROUNDBAIT

In each mixture that is prepared according to the ideas of multiple champion Zsolt Benzár, there is a harmony of flavors, fragrances, high-quality ingredients and, of course, the essence of everything: experience. The efficiency of carp angling with match rods, feeders, long poles and the efficiency of bottom fishing can be enhanced by thoughtful moistening and preparations. Also, you should always follow the golden rules of the given method. Benzar Mix carp baits include traditional baits with basic flavors and additives, as well as baits developed for competitions. These include special ingredients, and are the favorite delicacies of carps!

BENZAR MIX
BIG SERIES
GENERAL GROUNDBAIT

The Benzar Mix Big Seria ground bait series, as its name suggests, was designed specifically for big carps and grass carps. It is one of the most unique ground baits because of the high quality ingredients, the extra sized specks and the large amount of pellets. As it dissolves slowly, it keeps the fish on your feed for a long time.

The Benzar Mix Feeder Series were created under the supervision of Zsolt Benzár. These marvelous groundbaits have been developed specifically for feeder anglers. It was Zsolt Benzár who made the recipe and test-

ed the groundbait. Each groundbait of the feeder series can be characterized by smaller than the average granules, quick and easy solubility, and unbelievably strong aromas. You can find the right groundbait for every season, species and water. Their efficiency can be further enhanced by additives.

BENZAR MIX
METHOD MIX GROUNDBAIT

Zsolt Benzár hasn't stopped this year either. He has created the Method Feeder ground bait series. It is available in four different flavors: black halibut, fish&scopex, red krill and green betain. Thanks to their unique characteristics, these ground baits

dissolve only at the bottom of the water even in deep quarry lakes. In this way, you can avoid one of the common mistakes, namely, that the ground bait dissolves in the upper layers of the water attracting fish from the bottom, where your hook is.

BENZAR MIX
ASIAN CARP
 SPECIAL GROUND BAIT

This fine consistency groundbait contains dry milk powder, ground plankton and various proteins. It creates a huge cloud in the water. Bighead carps, which feed on the surface, react immediately to this attractive food source. This groundbait appeared on the market as a real novelty. Besides bighead carps, you can also pursue silver carps and other non-predatory fish, such as common carps, crucian carps and breams with this wonderful groundbait.

BENZAR MIX
PANETTONE CARP CARAS
 GROUND BAIT

This mix is, without a doubt, one of the best ground baits that Zsolt Benzar has ever made. It's a fine black ground bait made specifically for professional fishing. Its aroma is unbelievably pleasant, similar to the well-known Italian biscotti, which of course works marvelously for everyday fishing too.

BENZAR MIX MICRO METHOD FLUO PELLET

Nowadays, pellets are almost as popular as ground baits. The Benzar Mix Micro Fluo Pellet immediately draws the attention of the fish thanks to its vivid fluorescent color. Also, its

intense aroma makes the fish feed. The pellets dissolve from the feeder basket after reaching the bottom. However, they preserve their consistency for a long period.

BENZAR MIX FLUO BRITISH BREAD

Breadcrumbs are one of the main ingredients of bream and carp fishing. By the time your fine ground bait will have dissolved, these bigger specks of breadcrumbs will still be at the bottom providing food to bigger fish that arrive to your feed later. Thanks to its

fluorescent color it will attract the attention of the fish immediately. Be careful not to put too much crumbs into your ground bait. Maximum 15% should be enough.

BENZAR MIX
ENGLISH BREAD
ADDITIVE

Anglers often put this additive into the groundbait. Basically, they consist of breadcrumbs that go through a special process. In the shops, you can find natural, colored, floating and sometimes sinking versions. They are natural, easy-to-digest food sources for fish. Breadcrumbs make your groundbait a bit more lumpy, more rustic, and, of course, more attractive. The crumbs have various sizes, and during fishing, they're floating in different layers of the water. No fish can resist this palatable food! The mixing proportion that we would recommend is 3-15%.

carp	98098-196

BENZAR MIX
PASTONCHINO
ADDITIVE

red	98098-291
yellow	98098-292

Pastonchino is a special additive. It's made from heavy breadcrumbs of medium size and various seeds. The oily breadcrumbs and seeds have various aromas. Mixed to the groundbait in the right proportion, the exceedingly pleasant and long lasting aromas of Pastonchino keep the fish feeding for a long period of time. This additive, which was originally used in Italy, has become widespread even in Hungary. It is used by professional anglers as a supplement to groundbaits for common carps, crucian carps and breams. The recommended portion in the groundbait is 15%.

94005-150

BENZAR MIX
MAGGOT GLUE
200ml

BENZAR MIX
STICKY GRAIN
STICKY GRAIN

Pellet and seed binders help you achieve distant feeds. You can mold large amounts of pellets and seeds together, so even larger shoals of carp will keep searching for food around the hook for a long period of time.

BENZAR MIX
TTX
ADDITIVE

natur	94005-120
yellow	94005-130
red	94005-131
black	94005-132

An indispensable ingredient especially of ground baits for carps, but may be added to any ground bait. Pour 2.5 to 2.8 litres of water to 1 kg of corn scones. After it absorbs the water, mix the pulpy material to approximately 3 kg of ground bait and, if necessary, moisten the mixture more. It is advisable to break the ground bait through a rough sieve several times.

SILVER CARP
METHOD PELLET BOX
400g

Silvercarp mix is also available in granular version. Bighead carps react immediately to this attractive food source. This groundbait appeared on the market as a real novelty. Besides bighead carps, you can also pursue silver carps and other non-predatory fish, such as common carps, crucian carps and breams with this pellet.

BENZAR MIX
RAPID PELLET MIX

The number of Benzár novelties in 2018 is almost infinite. The Benzár Rapid Pellet Mix is one of the easiest-to-use mixes. The box comprises of two different products. These are the micro pellet and the Particle Pasta. Both products can be extremely effective, and they've been preferred by many anglers. Together, however, they can be made even more catchy! All you have to do is mix the content of the box thoroughly, and leave the mix for a few minutes. The prepared mix is immensely rich, as it consists of lumpy ingredients.

BENZAR MIX
BLACK HALIBUT PELLET

Based on our experience it's fair to say that halibut pellets are one of the most widely used baits. Also, they can be extremely catchy. The Benzár Mix Black Halibut Pellets can be used in natural waters, or fisheries for pursuing trophy-sized carps and grass carps. Due to their enhanced fish oil content they are catchier than the previous halibut pellets. They are available in both natural and flavored versions, but you can also boost them by adding aromas to it, for example one of the new Benzár liquids.

BENZAR MIX

PELLET

2 mm / 6 mm

Benzar Mix Pellets dissolve in the water later than the rest of the ingredients of the groundbait, so they provide food for larger fish which arrive to the feed. They are available in several colors and flavors so that you can find the right one under all circumstances. You can use the 2 mm pellet with different aromas. Also, you can moisten it and use it with the method feeder.

CARP HUNTER

COCKTAIL PELLET

"Shaken, not stirred" goes the famous catchphrase from the movie. This might be true for cocktails, but definitely not for pellets as they have to be thoroughly mixed with water and your favorite liquid aroma

98059-110

BENZAR MIX

HALIBUT PELLET

12 mm

When it comes to summer carp fishing, halibut pellets are the best choice! Benzar Halibut Pellets stand out from other halibut pellets. Thanks to their high protein content, they make even the biggest carps feed in waters warmer than 20 °C. They are perfect in themselves or mixed with boilies.

honey 98055-803

CARP HUNTER

HALIBUT PELLET

12, 16 mm

Large sized pellets made from high quality ingredients and excellent aromas. Thanks to their prefabricated holes they are recommended not only for feeding but also as hookbaits on hair rigs or bait bands. Their package makes them ideal for longer fishing trips or large feedings. They are recommended for summer fishing when, due to their slow dissolution, they remain at the bottom of the water for a long time.

BENZAR MI TURBO BOILIE

Ready-made boilies are an excellent alternative to anglers who have no time or means to make their own boilies. As to their ingredients, they contain everything which can be expected from baits like this: proteins, appetite stimulants, aromas and tiny seeds to enhance dissolution. Of course, all in the right proportion. They are available in various flavors. Thanks to the small bag, you don't have to buy a lot at once, so they'll be fresh when you need them.

250 g

BENZAR MIX TURBO SOLUBLE BOILIE

The excellent quality of ingredients guarantee that the Benzar Mix Turbo Soluble Boilie attracts magnificent common carps and grass carps to near your hook even in seasons when the number of bites are low. The predominance of carbohydrates in the bait makes it unbelievably attractive to feeding fish. Due to its outstanding dissolubility, it emits fragrance and substances shortly after it gets into the water, and keeps doing so until it's completely dissolved. This takes 3 to 4 hours. It can be combined with pop-up baits, which makes it even more effective.

BENZAR MIX METHOD PUFFY

The Benzár Method Puffy is a traditional bait that has been rethought. We've been using traditional "puffy" [a special kind of pop-up ball] primarily in carp fishing. It's a floating bait which has one mistake: it becomes soaked quickly, and loses its buoyancy. Conversely, The Benzár Method Puffy can resist water for more than 5 hours, which is unbelievable!

BENZAR MIX MINI POP UP PELLET

The official rules of feeder competitions strictly define the baits that anglers can use. Only limited size baits with natural ingredients may be put on the hook. Technically, this rules out the possibility of using any kind of floaters.

honey	98090-003
strawberry	98090-013
garlic	98090-046
nase-barbel	98090-055

Surprisingly, Benzár Mini Pop-ups are made from special, aromatized and extruded millet seeds, thus, they can be used in fishing competitions too. There is no doubt that this is a great advantage in a competition. Fishing with these baits is in compliance with the rules.

BENZAR MIX POM POM BAITS 35 pcs

What would be the effect if our bait consisted only of aromas? You will know the answer immediately if you try the POM POM Baits. Don't worry, you don't have to wait too long for the bite. You can use it on bait spikes too.

Drilled pellets with strong buoyancy. They are available in various sizes and flavors. They make baiting a piece of cake.

CARP EXPERT
DIPPED PELLET
9-12 mm

Pellets can be made catchier if they're dipped. Thanks to their high oil, protein and amino acid content, fish love eating them. This series include different pellet types and flavors both for cold and warm water.

EFFICIENCY ENHANCEMENT WITH BENZAR AROMAS

Fortunately, angling has changed. Today, we don't have to wait hours after casting our line to the water. Even the greatest ground baits, boilies, and pellets can be improved by the Benzar Mix aromas. As a result, you have to wait less for the take. Let's take a look at Zsolt's latest aromas so that we can use them effectively.

BAITS

250
ml

BENZAR MIX BAIT BOOSTER

The Benzar Bait Booster is a wonderfully versatile liquid, as they can be used for making any ground bait catchier. It is an extremely dense aroma. Before you use the Booster, it's worth dissolving it in water. When the Booster is dissolving in the water, it makes a fluorescent cloud in which the fish are less shy. Then, you can mix it with your dry ground bait. It is available in practical 250 ml bottles.

chocolate & orange	93710-088	liver	93710-072
pineapple	93710-076	glm	93710-099

BENZAR MIX BAIT LIQUID

The Benzar Bait Liquids feature unbelievable density, high quality, and extreme attractiveness. These liquids are more than simple aromas. They are available in 500 ml bottles. It is important to note that they are PVA friendly, so you can aromatize stick mixes with them. On the other hand, they might be the best choice for making boilies. They are all fish based liquids.

500
ml

complex fish oil	93700-009	pineapple	93700-076	mango & fish	93700-092

ZSOLT BENZAR ABOUT JELLY BAITS

I take great pride in the fact that the baits hallmarked by my name have won prizes in such prestigious exhibitions as EFTTEX. This success provides inspiration for further research and improvements. Although there had been artificial live bait imitations before the appearance of the Jelly Baits, none of them was made of natural albumin based ingredients. So far, only we've managed to do that.

CARP EXPERT SWEET CORN

Very popular corn bait produced with first-class aromas in the most attractive flavors. They are available in sweet, fruity, stinky and spicy flavors. You can find Carp Expert dipped corns suitable for any kind of water. The attractive color of the bait further enhances the luring effect of the grains.

CARP EXPERT NATUR HEMPSEED

It could be indispensable in coarse fishing. Hemp mixed into the groundbait can significantly improve the chances of catching common carps or grass carps. You can also use it as hookbait with thin, tiny hooks.

98009-000
natur

CARP EXPERT SWEET CORN IN JUICE

Flavored corn stored in a traditional way, in juice. They are available in well tried flavors. The high-quality, healthy grains stand firmly on the hook and resist the nibbles of smaller fish. The history of this product goes back many decades. They are ideal for almost all kinds of non-predatory species from bream to common carp and grass carp. Be it bottom fishing, feeder fishing or float fishing, they won't let you down.

CARP EXPERT SWEET CORN GRASSCARP

These flavored corns are marinated through a special process. They are excellent fish attractants in the feeding season of grass carps. The special reed bud extract is an irresistible delicacy for this secretive species, which feed only seasonally. Available in dipped and pickled versions, the former in intense color and aroma, the latter with grass seeds. The flavors and fragrances of grass seeds multiply the attracting effect of the corn.

SEEDS & SEED MIXTURES

feeding & bait

seven mix 98010-012

CORN - the basic ingredient for traditional luring feeding for centuries. Boiled corn maintains its flavour for a long time even without refrigeration. Available in natural, honey, vanilla and strawberry flavour. **HEMP SEED** - germinated, boiled hemp seeds can be used very successfully for the majority of non-predatory fish species. **TIGER NUT** - boiled tiger nuts are the kings of all ground baits. Made specifically for anglers for large carps. Thanks to its very high contents of sugar, proteins and oil, it is a favourite delicacy of large-bodied species. **HOLIDAY MIX** - a mixture of corn, wheat

and hemp. A basic ground bait mixture for a very reasonable price, containing the favourite bites of the fish. **SUGAR BOMB** - made of corn, wheat and tiger nuts. A mixture of ground bait enriched with tiger nuts, for a very reasonable price. Due to its high carbohydrate content it is excellent for feedings in late spring, summer and autumn. **SEVEN MIX** - a mixture of corn, tiger nuts, hemp, chickpeas, lupins, peanuts and maple seeds. The king among boiled ground bait mixtures! No fish can resist this tempting delicacy.

CARP EXPERT

FLAVORED SEEDS

The effect of rich, natural flavors is further enhanced by intense aroma additives. This series contain two types of wheat and four types of classic corn with

the most effective flavors. Besides feeding, they can also be used as excellent hookbaits if you string them. Unopened, they remain fresh for 6 months.

CARP EXPERT

NATUR SEEDS

The natural flavours and fragrances released as a result of a special treatment ensure a long-lasting attraction effect.

THE ONE®

THE ONE PURPLE SOLUBLE BOILIES 18 mm, 22 mm, 1 kg

The first member of The One family is The Purple One. In addition to crayfish and salmon oil, we used liquids and powders that no other manufacturer had used before. The strong crayfish aroma and, on the other hand, a slightly sweet flavor add up to a potent combination for big fish in every time of the year. We suggest that you should use the soft pellets in intensively stocked lakes, whereas the harder ones can be effective in natural waters and rivers.

98036-518
98036-522
98036-618
98036-622

THE ONE PURPLE HOOK BOILIES SOLUBLE 14 mm, 18 mm, 20 mm

The One boiled hookbaits are carefully selected products boosted with the infusion of high quality ingredients. Using these boilies, no carp can resist your hookbait. Thanks to a large amount of protein and other essential ingredients, The One hookbaits are palatable food sources for carps. Changing the pH level of the water, they attract carps and grass carps effectively. A strong crayfish character and a slightly sweet base equal an amazing carp catcher, namely, The Purple One.

98036-926

THE ONE BOILIE & FEEDER PASTA PURPLE

The recipe for The One pastas and boilies is the same; however, the production process is different. Although when making pastas we use the same components with a bit stronger aromas, the consistency is totally different. The possibilities that pastas offer is almost infinite.

98205-040

THE ONE AMINO DIP PURPLE

The One dip to make your baits more attractive. Its strong aroma and high nutritional value attract fish like magnet. The carefully selected ingredients of this The One product involve everything that a quality dip needs.

98255-040

THE ONE POP-UP BOILIES PURPLE 60 g

The One Fluoro pop-ups are ultimate fish attractors. Among their ingredients we can find proteins, fish oils, stimulants, betain HCl, amino, aromas, colorings and substances that help the boilies dissolve.

98036-915

THE ONE PVA & BOILIE JUICE PURPLE 250 ml

The use of liquid aromas is becoming more and more popular. Fish can notice the extra strong aromas even from a distance, and will definitely pay a visit to your feed.

98260-040

THE ONE PURPLE HOOK BOILIES BOILED 14 mm, 18 mm, 20 mm

The One hookbaits are palatable food sources for carps. Changing the pH level of the water, they attract carps and grass carps effectively. Only natural ingredients are used in the manufacture without artificial coloring.

98036-925

THE ONE PVA SOUSAGE + 100 ml LIQUID PURPLE

Groundbait mix, made of high quality crushed and milled particles, filled into a PVA mesh.

You can also find a liquid booster in the bag, with minimum 30 % protein content and fast dissolving ability.

98230-040

THE ONE GROUNDBAITS MIXER PURPLE 500 ml

A superb liquid with corn syrup and molasses base. It has high amino content. We recommend mixing it with large particle groundbaits.

98250-040

THE ONE GROUNDBAITS SPOD MIX PURPLE 1 kg

Rich in animal and plant proteins, easily digestible fine particle groundbait. It is made from a special fish feed used in fish farms. It has excellent adhesive abilities, which makes it great for spod mixes and seed and pellet binders.

98200-040

THE ONE RED SOLUBLE 18 mm, 22 mm, 1 kg

The Red One boiled boilie is high in protein and carbohydrate. We used the same ingredients as in the other The One boilies. The Red One is a fruity-spicy boilie with fishmeal and some black pepper in it. As a consequence, it can be used successfully in all fishing situations, irrespective of weather conditions.

98036-118
98036-122
98036-218
98036-222

THE ONE RED HOOK BOILIES SOLUBLE 14 mm, 18 mm, 20 mm

The Red One is similar to our boiled boilies, but contains some delicious corn milk and other soluble ingredients. More spices and fruit aromas are added to it with some extra Haith's Robin Red. Its diameter is becoming smaller in the water. We suggest using The Red One hookbait in places where The Red One is used for feeding. Here is the dissolving time of the boilie (water temperature 22 °C): 18 mm/2 hours, 22 mm/3 hours.

98036-922

THE ONE BOILIE & FEEDER PASTA RED

The recipe for The One pastas and boilies is the same; however, the production process is different. Although when making pastas we use the same components with a bit stronger aromas, the consistency is totally different. The possibilities that pastas offer is almost infinite.

98205-020

THE ONE AMINO DIP RED

The One dip to make your baits more attractive. Its strong aroma and high nutritional value attract fish like magnet. The carefully selected ingredients of this The One product involve everything that a quality dip needs.

98255-020

THE ONE POP-UP BOILIES RED 60 g

The One Fluoro pop-ups are ultimate fish attracters. Among their ingredients we can find proteins, fish oils, stimulants, betain HCl, amino, aromas, colorings and substances that help the boilies dissolve.

98036-911

THE ONE PVA & BOILIE JUICE RED 250 ml

The use of liquid aromas is becoming more and more popular. Fish can notice the extra strong aromas even from a distance, and will definitely pay a visit to your feed.

98260-020

THE ONE RED HOOK BOILIES BOILED 14 mm, 18 mm, 20 mm

The One hookbaits are palatable food sources for carps. Changing the pH level of the water, they attract carps and grass carps effectively. Only natural ingredients are used in the manufacture without artificial coloring.

98036-921

THE ONE PVA SOUSAGE + 100 ml LIQUID RED

Groundbait mix, made of high quality crushed and milled particles, filled into a PVA mesh. You can also find a liquid booster in the bag, with minimum 30 % protein content and fast dissolving ability.

98230-020

THE ONE GROUNDBAITS MIXER RED 500 ml

A superb liquid with corn syrup and molasses base. It has high amino content. We recommend mixing it with large particle groundbaits.

98250-020

THE ONE GROUNDBAITS SPOD MIX RED 1 kg

Rich in animal and plant proteins, easily digestible fine particle groundbait. It is made from a special fish feed used in fish farms. It has excellent adhesive abilities, which makes it great for spod mixes and seed and pellet binders.

98200-020

THE ONE BLACK SOLUBLE 18 mm, 22 mm, 1 kg

The Black One boiled boilie is a hot and spicy boilie full of fish powder and black pepper. The original Haith's Robin Red powder and some liquid liver essence result in a high level of attraction. To this high quality base we added cuttlefish essence and tuna powder to make it even more unique. The Black One can be the best choice in the summer, even on the hottest days. It is a truly amazing boilie that can be used in various fishing situations, even in fishing tournaments. It works intensively in the water attracting and keeping the fish near your feed.

98036-322
98036-318
98036-418
98036-422

THE ONE BLACK HOOK BOILIES SOLUBLE 14 mm, 18 mm, 20 mm

The One boiled hookbaits are carefully selected products boosted with the infusion of high quality ingredients. Using these boilies, no carp can resist your hookbait. Thanks to a large amount of protein and other essential ingredients, The One hookbaits are palatable food sources for carps. Changing the pH level of the water, they attract carps and grass carps effectively. Only natural ingredients are used in the manufacture without artificial coloring. The Black One soluble hookbaits are infused with an extra amount of liver essence and black pepper.

98036-924

98205-030

THE ONE BOILIE & FEEDER PASTA BLACK

The recipe for The One pastas and boilies is the same; however, the production process is different. Although when making pastas we use the same components with a bit stronger aromas, the consistency is totally different. The possibilities that pastas offer is almost infinite.

THE ONE POP-UP BOILIES BLACK 60 g

The One Fluoro pop-ups are ultimate fish attracters. Among their ingredients we can find proteins, fish oils, stimulants, betain HCl, amino, aromas, colorings and substances that help the boilies dissolve.

98036-913

THE ONE PVA & BOILIE JUICE BLACK 250 ml

The use of liquid aromas is becoming more and more popular. Fish can notice the extra strong aromas even from a distance, and will definitely pay a visit to your feed.

98260-030

THE ONE AMINO DIP BLACK

The One dip to make your baits more attractive. Its strong aroma and high nutritional value attract fish like magnet. The carefully selected ingredients of this The One product involve everything that a quality dip needs.

98255-030

THE ONE BLACK HOOK BOILIES BOILED 14 mm, 18 mm, 20 mm

The One hookbaits are palatable food sources for carps. Changing the pH level of the water, they attract carps and grass carps effectively. Only natural ingredients are used in the manufacture without artificial coloring.

98036-923

THE ONE PVA SOUSAGE + 100 ml LIQUID BLACK

Groundbait mix, made of high quality crushed and milled particles, filled into a PVA mesh.

You can also find a liquid booster in the bag, with minimum 30 % protein content and fast dissolving ability.

98230-030

THE ONE GROUNDBAITS MIXER BLACK 500 ml

A superb liquid with corn syrup and molasses base. It has high amino content. We recommend mixing it with large particle groundbaits.

98250-030

THE ONE GROUNDBAITS SPOD MIX BLACK 1 kg

Rich in animal and plant proteins, easily digestible fine particle groundbait. It is made from a special fish feed used in fish farms. It has excellent adhesive abilities, which makes it great for spod mixes and seed and pellet binders.

98200-030

THE ONE GOLD BOILED 18 mm, 22 mm, 1 kg

The One boiled boilies are essential food sources for big carps. They are rich in carbohydrate and protein. We infused the baits with liquid stimulants that are built on a fish powder and milk protein base. In the manufacture, we use only natural ingredients, thus, these products are 100% environmentally friendly.

THE ONE BOILIE & FEEDER PASTA GOLD

The recipe for The One pastas and boilies is the same; however, the production process is different. Although when making pastas we use the same components with a bit stronger aromas, the consistency is totally different. The possibilities that pastas offer is almost infinite.

98260-050

THE ONE GOLD HOOK BOILIES SOLUBLE 14 mm, 18 mm, 20 mm

The One boiled hookbaits are carefully selected products boosted with the infusion of high quality ingredients. Using these boilies, no carp can resist your hookbait. Thanks to a large amount of protein and other essential ingredients, The One hookbaits are palatable food sources for carps.

98036-928

THE ONE AMINO DIP GOLD

The One dip to make your baits more attractive. Its strong aroma and high nutritional value attract fish like magnet. The carefully selected ingredients of this The One product involve everything that a quality dip needs.

98255-050

THE ONE GOLD HOOK BOILIES BOILED 14 mm, 18 mm, 20 mm

The One hookbaits are palatable food sources for carps. Changing the pH level of the water, they attract carps and grass carps effectively. Only natural ingredients are used in the manufacture without artificial coloring.

98036-927

THE ONE PVA SOUSAGE + 100 ml LIQUID GOLD

Groundbait mix, made of high quality crushed and milled particles, filled into a PVA mesh.

You can also find a liquid booster in the bag, with minimum 30 % protein content and fast dissolving ability.

98230-050

THE ONE GROUNDBAITS MIXER GOLD 500 ml

A superb liquid with corn syrup and molasses base. It has high amino content. We recommend mixing it with large particle groundbaits.

98250-050

THE ONE GROUNDBAITS SPOD MIX GOLD 1 kg

Rich in animal and plant proteins, easily digestible fine particle groundbait. It is made from a special fish feed used in fish farms. It has excellent adhesive abilities, which makes it great for spod mixes and seed and pellet binders.

98200-050

THE ONE GUMMY STOPS SMALL

The One stoppers are made of soft silicone. Due to their material, they won't slide away from their position on the line. You can use them for stopping your feeder or lead. In order to prevent the boilies from falling off, they can also be put on hair rigs.

79633-410
79633-420

THE ONE STRINGER NEEDLE

The One PVA Splicing needle is designed specifically for attaching filled PVA bags to your hooklink. The thin wire of the needle is made from stainless steel. The latch closes when the needle is pulled back, which prevents the hook of the needle from damaging the mesh of the PVA bag.

80209-000

THE ONE SPLICING NEEDLE

The One leadcore needle is great for threading braids with lead wire in the middle. Using leadcore as a hooklink ensures that the hook will lie at the bottom. This will deceive suspicious carps!

80209-010

THE ONE BOILIE NEEDLE EXTRA STRONG

An all-around needle, ideal for all kinds of baits on hair rigs. The head of the needle is fine enough to penetrate corn, soft pellets, pre-drilled boilies, and many other hook baits. The wire is made from stainless steel.

80209-030

THE ONE BOILIE DRILL 11 cm

Top quality, heavy-duty boilie drill. As all other The One products, it is absolutely reliable. Thanks to its design you can drill hard tiger nuts, dry corns, boilies and pellets with it.

80209-040

THE ONE QUICK CHANGE SWIVEL No. 8

This high quality The One change swivel has a traditional design. The durable material of the snap is exceptionally powerful. Precision manufacturing is a guarantee of super smooth run.

82199-508

THE ONE ROLLING SWIVEL No. 8

Strong and safe rolling swivel, which could easily be the most powerful part of your terminal tackle. It is available in the most popular no. 8 size. It's ideal for inline leads and classic lead clips.

82199-608

THE ONE BIG EYE SWIVEL No. 11

Extra strong rolling swivel with ring. The ring allows the hooklink and the hook bait to move freely. Size 8 is a perfect choice for making chod rigs and helicopter rigs, but it also fits most lead clips.

82199-710

THE ONE FLUOROCARBON LEADER 25 m 0,40 mm 20 lb

100 % pure fluorocarbon hooklink. A bit stiff but still easy to tie. It features unusual resistance to abrasion. This invisible leader will trick cautious carps even in crystal clear water.

31700-040

THE ONE SKINNY LEADER 20 m 25 lbs BROWN

The One Skinny is a revolutionary braided hooklink with exclusive, matt coating. The core of the line is a soft braid with high breaking strength. The coating of this leader cannot be removed! Available in 15 lb and 25 lbs versions.

31701-015; 31701-020

THE ONE LEADER STIFFY 20 m 0,50 mm 20 lbs

As its name suggests, the Stiffy is an essential part of professional stiff rigs. The key to its success is low visibility, high abrasion resistance and unbelievable durability.

31703-050

THE ONE MONOFIL BOAT LINE 1200 m 0,35 mm DARK GREEN

The One Boat is a superior mono-filament line. Due to the special production process, the line has unbelievable breaking strength and knot resistance, but it is also super soft.

31720-030; 31720-035

THE ONE FREE FALL LEADER 10 m 0,75 mm 40 lbs

The Free Fall leaders are made of the finest braids possible to achieve superior softness. Thanks to their Cameleon and Silt colors, they can blend into any terrain. Due to their revolutionary material they sink in the water like a leadcore, but they're still soft, which lets the bait move freely. You should use the same knots as with leadcores.

31702-040 SILT
31702-140 CAMELEON

THE ONE LEADER STRIP-IT 20 m 0,52 mm 25 lbs SILT

The One Strip-It is a classic skin line with removable coating. The core of the line is a strong but soft braid. The coating can be removed easily from the round braid.

31704-052

THE ONE MONOFIL CASTING LINE 270m 0,18mm FLUO GREEN, 0,20mm FLUO GREEN, 0,22mm FLUO YELLOW, 0,25mm FLUO YELLOW

The One Casting line was developed for distance casting. Its high breaking strength and abrasion resistance allow The One Casting to perform well in tough conditions too. The bright, fluorescent green and yellow colors are of great help when you're fighting with aggressive fish at night.

31710-018 31710-020
31710-022 31710-025

THE ONE BRAID CUTTER

The One Scissors are made of high quality surgical steel with laser sharpened blades. It cuts through everything from leadcores to fluorocarbons!

80209-060

THE ONE SILICONE TUBE 60 cm 1,5 mm TRANSPARENT, MUD BROWN

You can protect the hook knots with The One silicone tube. It is suitable for 2-4-6 size hooks. Silicone tubes are also great for setting the position of the hair on the hook or as a stop on safe helicopter rigs.

79031-500; 79031-510

THE ONE ANTITNAGLE SLEEVES SOFT 40mm TRANSLUCENT BROWN, GRAVEL, TRANSLUCENT GREEN

The One Tail Rubber is a short anti-tangle tube made of flexible but strong material. It can prevent your hooklink from being tangled up on your main line.

79040-041; 79040-042; 79040-043

THE ONE ANTITNAGLE SLEEVES SOFT 20mm TRANSLUCENT BROWN, GRAVEL, TRANSLUCENT GREEN

The One Tail Rubber is made of flexible but strong material. Due to its short size, it's ideal for making helicopter or chod rigs, but can be used by short hooklinks too. Length 20 mm, packing 20 pcs/bag.

79040-021; 79040-022; 79040-023

THE ONE SHRINK TUBE 60 cm 1,2 mm TRANSLUCENT BROWN, 1,2mm TRANSLUCENT GREEN, 1,6mm TRANSLUCENT BROWN, 1,6 mm TRANSLUCENT GREEN

The One Shrink tube is a smart accessory to improve your hair rig. You can extend the length of the shank of your hook by shaping the hook aligner. At the same time, due to its flexibility, it's a perfect hook knot protector.

79031-520; 79031-530; 79031-540; 79031-550

THE ONE FREEDOM LEAD CLIPS WITH TAIL RUBBER GREEN

The One Lead Clip with a special safety system. When the rig is snagged it will automatically release the lead and free your rig. Use it with size 8 swivels.

79629-500

THE ONE LINE ALIGNER ADAPTOR SMALL/TRANSLUCENT BROWN, LARGE/TRANSLUCENT GREEN

The One Hook Aligner can replace shrink tubes. The only thing you have to do is to thread the hooklink through the tube and place it on the shank of your hook. Using hook aligners can help you achieve solid hook sets.

79040-100; 79040-105

THE ONE EL ADAPTOR LONG

79040-000

THE ONE BOILIE STOPS HARD TRANSPARENT, HARD BROWN

The One Boilie stopper follows tradition. It has a classical shape, but it's also a bit different from other stoppers, because its quality is much better!

79633-010; 79633-020

THE ONE HOOK CCS-2 No. 4, No. 6, No. 8

The One CCS-2 has a short, bent shank with laser sharpened point. Thanks to its shape, it can be ideal for sinking and pop-up baits too. It has Teflon coating, which delivers perfect penetration. The matt finish doesn't shine in the water in order not to frighten shy fish.

41615-004; 41615-006; 41615-008

THE ONE HOOK CE-4 NO. 4, NO. 6, NO. 8

41616-004; 41616-006; 41616-008

THE ONE RIG BOX

If you're looking for a box in which you can store all your tackle that you need for making your carp rigs, The One rig box is for you! It is not only a simple box, it's a box system developed especially for carp anglers. In the small compartments there is enough space for hooks, swivels, snaps, tail rubbers, and all the other accessories that you might carry with you. The long inner box is great for storing your rigs. On the lid of the main box, you can find a ruler that can help you adjust the perfect length of your rigs.

PVA BOMBS contain groundbait with special ingredients. Owing to a unique technology, PVA bombs blast almost immediately around the bait after hitting the bottom of the water.

FISH-LIVER: A mixture of grist with different particle sizes rich in animal and plant proteins. It dissolves easily in the water. Its liver powder content exceeds 5%, and its total protein content is above 30%. The quality of the mixture can be enhanced by adding high quality fish oil into it. We recommend that you use it primarily in waters whose temperature is above 18°C, but it has also brought surprising results in colder waters (below 15 °C). This mixture has set several records. **HONEY POLLEN:** Honey is one of the oldest fish attractants. Pollen is rich in vitamins and amino acids. Probably that's why it is loved by carps! The mixture contains ground pellets with high content values and ground and crushed oily seeds. It can be used even as fish feed. This combination of flavors and fragrances is extremely effective in the spring and the autumn.

ANISE-SPICE: The flavor of anise had been used in angling for a long time, but later it was forgotten. Nevertheless, its high oil content and unique aroma have beneficial effects on the feeding of fish. Anise oil is an essential ingredient of this mixture. It contains 2% Robin Red, which is considered to be an ultimate fish attractant in itself. It has, furthermore, very high protein content. 72% of the mixture contains LT fish meal and a milk derivative that triggers fast dissolution of content values in the water. The anise-spice bombs can be ultimate fish catchers in any season even on hot summer days. **ATOM-PELLET MIX:** This mixture is made from different size pellets with high animal protein content and high quality carbohydrate content. In the production, the mixture is soaked in molasses. Then, it is filled into the mesh. We use molasses because of its high betaine content, which stimulates the appetite of fish. As a result of different size pellets, our bait is surrounded by a luring substance, which dissolves gradually in the water. Due to this special effect, the mixture is a favorite delicacy of carps searching for high energy food source in warm lakes.

AMINO-MOLASSES MIX: A mixture containing six types of crushed seeds (corn, tiger nuts, hemp, yellow millet, red millet, rapeseed). Before the seeds are soaked and boiled, they are ground through a special technology. The mixture boiled in molasses is then filled into PVA meshes. The classic boiled seeds bring excellent results in every season. Due to its high molasses content, the Amino-Molasses Mix dissolves slower. Consequently, it produces a lasting effect in the water. **METHOD FEEDER CLASSIC RED:** It is based on fine grained method feeder groundbait. It's red color is ideal at almost all period of the year. It is rapidly attracting fish into your fishing spot due to the pop up particles in the mix. The flavor was adjusted to the classic red method receipts, with Strawberry-Fish taste. It is a bit stinky, a bit sweet, and this combination can be a winner at any season. **METHOD FEEDER CLASSIC YELLOW PELLET:** It is also based on fine method mix, but comparing with the red one, it has shiny, attractive yellow color, with dark pellets, and particles. The black/yellow contrasted color combination attracts the fish like a magnet. It is recommended when the water temperature is above 10°C. It also has the pop up particles, which can lead the way to your hook even at the slowest current at the bottom.
